         The specification describes 5' expressed sequence tags (ESTs, see X40825-X41093) for human secreted proteins (see Y01602 and Y11994-Y12260). The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopolesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/
                                                                                                                                                                                                      New nucleic acids encoding human secreted cDNA libraries prepared from kidney, fetal muscle, muscle and heart tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell. The present sequence is used in the course of the invention.
                                     be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopolesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; antiinflammatory; tumour inhibition; antitumour; ss.
                                                                                                                                                                                                                                                                                                                                                                        New nucleic acids encoding human secreted proteins - obtained cDNA libraries derived from umbilical cord, lymph ganglia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Oligoribonucleotide,

                              x41094 to x41347 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in Y12261 to Y12514, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chemokinetic activity, haemostatic and thrombolytic activity, receptor/ ligand activity, antiinflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopolesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostat: thrombolytic; anti-inflammatory; tumour inhibition; ss.
                                                                                                                                                                                                                                                                                                                               New nucleic acids encoding human secreted proteins - obtained from cDNA libraries prepared from e.g. liver, ovary, brain, prostate, kidney, lung, umbilical cord, placenta and colon tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Oligoribonucleotide -Cap SEQ ID NO:2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Duclert A, Dumas Milne Edwards J,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell. The present sequence represents an oligoribonucleotide used in an example from the present invention.
                     Specific coupling of the 5' cap of mRNA to amino-functionalised cpd - by eliminating 3' diol, oxidn. of cap diol to aldehyde and reaction with amine, e.g. for isolation of complete RNA, labelling

```
The first step in a new method for specifically coupling the cap of CC the 5'-end of a eukaryotic mRNA to an amino-functionalised compound CC involves specifically modifying the 3'-end of the mRNA so that the CC last base no longer contains OH groups at the 2' and 3' positions. CC Then, the 2', 3'-cis diol of the methyl guanosine residue at the 5'-end CC can be oxidised to form a 2', 3'-dialdehyde which is ultimately coupled CC with the amino group of the amino-functionalised compound. The method CC is used to label specifically at the 5'-cap, to isolate the 5'-end CC is used to label specifically at the 3'-end of DNA, to produce double of mRNA in a sample, to produce the 5'-end of mRNA or to capture mRNA-CC binding proteins. In a specific example of the coupling method, a CC double-stranded template was prepared by PCR amplification using a CC 5'-primer containing the T' RNA polymerase promoter (T43579) and CC a 3'-primer (T43580). When the template was transcribed in the CC presence of cap analogue m76(5')ppp(5')G, a capped mRNA transcript CC having the present sequence was produced. The 5'-capped mRNA was CC coupled to a biotin label via a hydrazine linker.

CC Antibodies against the proteins encoded by the extended cDNAs are useful in identification of tissue types or cell species, as well as identifying CC tissue specific soluble proteins. The sequences can be used for chromosome mapping and identification of genes associated with hereditary CC diseases or drug response. Signal sequences from the cDNAs can be used in CC construction of secretion vectors. Other sequences derived from the CC extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter sequences. Some of the proteins may be useful in CC diagnosing and treating several disorders including, but not limited to: C cancer, hyperilpidaemia, cardiovascular and neurodegenerative disorders, autoimmune diseases, and rheumatic diseases, embryogenic disorders, infertility and myopathies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Align seg 1/1 to: Z40749
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-08-860-232-1 x Z40749
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Percent Similarity: 100.000

The invention relates to 70 nucleic acids encoding human secreted proteins. The extended cDNAs (or genomic DNAs obtainable from them) may be used to prepare PCR primers and probes. These are useful for forensic matching or positive federalification by DNA sequencing. They may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        x88170 standard; RNA; 47

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               secreted proteins. They may also be used in diagnostic, forensic, gene therapy and chromosome mapping procedures. Uses also include design of expression vectors and secretion vectors. This sequence represents an oligoribonucleotide primer used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 2; Page 131; 307pp;

The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, cegulators of reproductive hormones or cell movement or have regulators of cellular proliferation or may act as immune system cegulators of reproductive hormones or cell movement or have the control of the procedures to comencactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour conhibition activity. The DNAs can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify the genes corresponding to the extended cDNAs. They are also useful for constructing a high resolution map of the human chromosomes. They can also used for gene therapy to control or treat genetic diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ph.D.
TTTTT-3'], double-stranded CDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National
